CommoditAg 2.5% Mg EDTA

EDTA CHELATED MAGNESIUM FOR THE PREVENTION AND
CORRECTION OF MICRONUTRIENT DEFICIENCY

MIXING INSTRUCTIONS

1. Put 1/3 of water or fertilizer in tank
2. Add other chemicals (if applicable)
3. Fill tank with balance of water or fertilizer
4. Add correct amount of chelate (shake each container vigorously before use)
5. Agitate adequately to mix

CAUTION: Check compatibility with orthophosphates, high potash suspensions, and chemical mixtures.

GENERAL RECOMMENDATIONS:

CommoditAg 2.5% Mg EDTA is intended for use in a complete crop nutritional program where a soil and/or plant tissue analysis has indicated a magnesium deficiency. CommoditAg 2.5% Mg EDTA may be applied with CommoditAg liquid fertilizers, fertilizer suspensions, nitrogen solutions, or water.

HIGH RESPONSE CROPS:

corn, small grains, potatoes, sugar beets, tobacco,
cotton, cabbage, carrots, celery, cucumbers, melons,
squash, snap beans, onions

OTHER CROPS:

soybeans, sorghum, tomatoes turnips, grasses

	pints/A	
Row ¹	Banded ²	
1-3	2-5	

1-2	2-4
-----	-----

1. Row recommendations are intended to provide starter application of magnesium for the current year crop and are not expected to correct severe magnesium deficiencies. Additional banded or foliar applications may be necessary to correct severe deficiencies.
2. Banded generally refers to 2" to the side and 2" below the seed and is usually applied during planting.

FOLIAR APPLICATIONS:

For all the above crops plus tree fruits, citrus, small fruits, and ornamentals:
1-2 pints/A in minimum 10 gallons of water

Aerial: 1-2 pints/A in minimum 5 gallons of water

CommoditAg liquid fertilizer may be used as a carrier at 3-5 gallons per acre. More than one application may be required for severe deficiency.

NOTE: Foliar fertilization is intended as a supplement to a regular fertilization program and will not by itself provide all the nutrients normally required by agricultural crops.

CommoditAg chelated micronutrients should not be used unless a deficiency is indicated by a soil test and/or tissue analysis, and/or appearance of deficiency symptoms. Optimum rate of application will vary between fields depending on soil pH and organic matter content.

Note: 1 pint of CommoditAg 2.5% Mg EDTA contains: 0.033 pounds of elemental magnesium.
